

Environmental Policy

Evergreen has always been committed to improve and promote sound environmental practice. By adopting poison free methods of pest control we are contributing towards helping protect our environment.

Pesticide Storage and disposal of toxic materials is one of the most common causes of environmental damage. We therefore ensure that we meet all legal requirements at all times. All special waste produced by Evergreen (the transferor) has to be recorded on a "Duty of Care Waste Transfer Note". At the point of incineration the transferee will sign for acceptance of waste, thus ensuring a paper trail for all special waste.

Specifically we shall

Comply with all relevant environmental laws and regulations.

Inform all employees of their responsibilities towards good environmental practice and the contribution that they can make to achieve continual improvements in environmental performance.

Set out clear environmental objectives which are relevant to the impact of our activities.

Identify performance targets by which progress towards these environmental objectives can be measured and renewed.

Report on the results of monitoring performance targets.

Evergreen Key Objectives

To reduce waste and use recycled materials where appropriate.

Where possible reducing the pollution of air, land and water.

Liaising with our customers and suppliers to promote sound environmental practice in the disposal of all materials used in the company's businesses .

Reduce the consumption of energy by sensible energy management of our vehicles, equipment and buildings.

Encouraging the development of sound environmental practice by all Evergreen staff.

Evergreen shall adopt Good Practice Procedures to ensure the most environmentally sympathetic means to support its service
